# The control plane for enterprise AI.

Testing, monitoring, and governing AI in production so enterprises  
can finally ship with confidence.

-  **Evaluate** Pre-deploy testing
-  **Observe** Production monitoring
-  **Govern** Compliance & audit

# What we will cover today.

|                                                                                        |                                                                                         |                                                                                 |                                                                               |                                                                                     |                                                                                       |

Our investment recommendation. |

# AI fails in ways traditional software never did.

### THREE FAILURE MODES

- **Hallucinations:** AI confidently delivers wrong prices, policies, or legal guidance, forcing humans back into the loop.
- **Security failures:** Prompt injection and PII leakage turn benign user inputs into vectors for exposing internal data.
- **Silent degradation:** Models drift as data and user behavior change. Conversion rates drop with no root cause and no alert.

### REAL-WORLD INCIDENT COSTS

### SCALE OF THE PROBLEM

#### PILOT FAILURE

95%

of GenAI pilots fail to deliver meaningful business impact

#### PRODUCTION RISK

67%

of AI models fail in production environments

### WHAT GOES UNDETECTED TODAY

production\_monitor · no governance layer

- FAIL** Hallucination detected in response 0.42 / 1.0
- FAIL** PII leakage in agent output detected
- FAIL** Model drift vs. baseline +18% err

# Openlayer is the control plane for enterprise AI.

WHAT OPENLAYER DOES

Evaluate · Observe · Govern

- **100+ behavioral tests** before launch, catching hallucinations, bias, and regressions before customers do.
- Traces every request, response, and tool call in production so teams can see exactly what models and agents are doing.
- Maps controls to ISO/IEC 42001, NIST, OWASP, and the EU AI Act, generating audit-ready evidence automatically.

FULL AI LIFECYCLE COVERAGE

OPENLAYER IN ACTION

|                                       |                                     |         |
|---------------------------------------|-------------------------------------|---------|
| openlayer · customer_assistant · v2.4 |                                     |         |
| PASS                                  | Outputs do not contain PII          | 0.99    |
| PASS                                  | Hallucination score below threshold | 0.03    |
| PASS                                  | Answer relevancy > 0.95             | 0.97    |
| WARN                                  | P99 latency < 5000ms                | 5,240ms |

Live test results from Openlayer's platform

## Three pillars. One platform. Built for builders.

### Evaluate

Behavioral tests across ML models, LLM apps, RAG pipelines, and agents. Integrated with CI/CD so regressions never reach production.

● ● ● eval · pre-deploy

**PASS** Bias check 0.98

**PASS** Toxicity gate 0.01

### Observe

End-to-end traces, drift detection, cost and latency analytics, and production incident replay across every model and agent.

LIVE METRICS

**1,017**  
requests/mo

**98%**  
pass rate

### Govern

Model inventory, risk classification, policy enforcement, and audit trails. Mapped to EU AI Act, ISO/IEC 42001, NIST, and OWASP.

EU AI Act

ISO 42001

Projected market size

CAGR

**36%**

Fastest-growing AI infra segment

### MARKET SIZE (\$B)

*"Openlayer named a Representative Vendor in Gartner's 2026 Market Guide for AI Evaluation and Observability Platforms."*

Gartner, 2026

### WHY NOW

Regulation tailwind

- EU AI Act and ISO/IEC 42001 require documented testing, monitoring, and risk management for high-risk AI systems.
- Boards are asking: "How do you know your AI is safe today?" Not just at launch.
- AI governance is moving from optional tooling to core infrastructure, exactly as security and observability did a decade ago.

### ENTERPRISE AI ADOPTION DRIVERS

## Built by people who felt this pain firsthand.

### Gabriel Bayomi

Founder & CEO · YC S21

Product-driven CEO and leading public voice on AI governance. Leads Openlayer's strategy and enterprise relationships. Go-to voice on why AI reliability is the next foundational infrastructure category.

### Vikas Nair

Co-Founder · Platform

Leads platform architecture, evaluation pipelines, and integrations across the ML and LLM stack. Deep expertise building systems that operate reliably at enterprise scale.

### Rishab Ramanathan

Co-Founder · Developer Experience

Focuses on making governance and observability feel natural inside developer workflows, ensuring Openlayer integrates without friction into the tools teams already use.

# Backed to build the AI governance and observability layer.

ROUND HISTORY

- 2021

**Y Combinator S21**

Selected for YC's Summer 2021 batch. Early validation of the AI evaluation thesis.
- 2023

**\$4.8M Seed**

Led by Quiet Capital. Validated evaluation and governance platform with early enterprise design partners.
- 2025

**\$14.5M Series A**

Led by Race Capital. Expanding enterprise product capabilities and scaling into regulated verticals.

KEY INVESTORS

- Race Capital
- Y Combinator
- Quiet Capital
- KPN Ventures
- Telefónica
- NXTP
- Mindset

*"Openlayer's development velocity has been among the fastest in our portfolio, growing nearly 5x in 2024 and on pace to match that this year."*

Chris McCann, Managing Partner, Race Capital

CAPITAL RAISED PER ROUND

## Enterprise SaaS with land-and-expand economics.

### HOW THEY MAKE MONEY

- Subscription plus usage-aligned pricing tied to number of projects, environments, and volume of evaluated and monitored traffic.
- Land with one or two high-risk AI workflows, then expand across more units, regions, and use cases over time.
- Distribution through direct enterprise sales and cloud marketplaces where procurement already operates.

### REVENUE GROWTH TRAJECTORY

### TRACTION PROOF POINTS

Real signal

- **Amdocs:** Fortune 500 telecom software giant serving AT&T, Vodafone, and T-Mobile. Publicly named as customer in Series A press release.
- **Telefónica:** Both a Series A investor AND an enterprise customer. Strongest possible signal of product-market fit.
- Trusted by Fortune 500 companies and startups across North America and Europe.
- Gartner named Representative Vendor in 2026 Market Guide. Institutional validation that enterprises are buying this category.

Amdocs

Telefónica

Fortune 500+

## Early-stage profile with strong valuation momentum.

### KEY METRICS

#### TOTAL RAISED

**\$19.4M**

3 rounds since 2021

#### SERIES A VALUATION

July 2025 (PitchBook)

#### EST. VALUATION TODAY

**\$78M**

April 2026 • +56% growth

#### REVENUE GROWTH

**5x**

In 2024, on pace to repeat in 2025

### VALUATION TRAJECTORY (\$M)

### WHY THE TRAJECTORY MATTERS

- Valuation grew \$50M to \$78M in under a year on \$19.4M total capital raised. Strong capital efficiency signal.
- 5x revenue growth two years running suggests genuine product-market fit, not just pilot traction.
- Land-and-expand model means revenue compounds as each customer governs more AI systems.

# Point tools vs. a unified AI control plane.

COMPETITIVE LANDSCAPE

| CAPABILITY             | OPENLAYER | ARIZE AI | LANGSMITH | BRAINTRUST | W&B |
|------------------------|-----------|----------|-----------|------------|-----|
| Evaluation             | ✓         | ✓        | ✓         | ✓          | ~   |
| Observability          | ✓         | ✓        | ~         | ✗          | ~   |
| Governance             | ✓         | ✗        | ✗         | ✗          | ✗   |
| Agent-native           | ✓         | ~        | ✓         | ~          | ✗   |
| EU AI Act / Compliance | ✓         | ✗        | ✗         | ✗          | ✗   |

WHY OPENLAYER WINS

- **Only unified platform:** competitors solve one piece. Openlayer covers evaluation, observability, AND governance.
- **Only compliance-native:** purpose-built for EU AI Act, ISO/IEC 42001, and NIST. No competitor has this depth.
- **Built for agents:** as AI moves to multi-step agents, Openlayer traces every tool call and decision in the chain.

MARKET POSITIONING

## Three bear cases, and why we are comfortable with them.

### THE RISKS

- **Market timing** AI governance might be seen as "nice-to-have" when budgets tighten.
- **Incumbents** Observability, cloud, or security vendors could bolt on basic AI checks.
- **Build vs. buy** Large enterprises might script their own evaluation and monitoring.

### THE DATADOG PARALLEL

AI governance is on the same path. Openlayer is 4 years in.

### THE REBUTTALS

- The EU AI Act, ISO 42001, and internal risk policy are converting governance from optional to required. Regulation is a floor, not a ceiling.
- Generic tools do not understand prompts, hallucinations, or framework mappings. Five years ago, Datadog was "optional." Now it is non-negotiable.
- Ad-hoc scripts do not scale into auditable, cross-team control planes. Enterprises can script one project, not a portfolio of AI systems.

## AI's next breakthrough is not smarter models. It is governance.

### TAILWINDS COMPOUNDING

- **Regulation accelerating:** EU AI Act is live. US frameworks are forming. Compliance will be mandatory for any enterprise deploying AI in high-risk contexts.
- **Agent explosion:** As AI moves from models to autonomous agents making decisions, the need for tracing, testing, and governance compounds dramatically.
- **AI becoming core infra:** Every enterprise will govern AI the way they govern software today, with monitoring, testing, and audit trails as default.

#### AGENTIC AI: WHY GOVERNANCE GETS HARDER

|            |             |           |
|------------|-------------|-----------|
| LLM app    | <div></div> | 1 step    |
| RAG system | <div></div> | 3-5 steps |
| AI agent   | <div></div> | 10-100+   |

Each step is a potential failure point. Openlayer traces all of them.

### STRATEGIC EXIT PATHS

- **Standalone platform:** Become the Datadog of AI governance. \$9.26B market ceiling by 2030 at 36% CAGR.
- **Acquisition target:** Natural acquirers include Datadog, Microsoft, Salesforce, and ServiceNow, all of whom need an AI governance layer and would rather buy than build.
- **Regulatory necessity:** In regulated industries such as finance, healthcare, and telco, Openlayer becomes as essential as compliance software is today.

## Back the control plane every enterprise will need before AI can safely scale.

### INVESTMENT THESIS

- **Massive, durable tailwind:** As enterprises push AI deeper into mission-critical workflows and regulators raise expectations, demand for governance infrastructure is non-discretionary.
- **Only unified platform:** Openlayer is the only player combining evaluation, observability, AND governance for ML, LLMs, RAG, and agents in one product.
- **Right team, right time:** YC-backed founders with strong fit, 5x growth two years running, Fortune 500 customers, Gartner-validated category, \$78M implied valuation on \$19.4M raised.

**\$9.26B**

### OUR RECOMMENDATION

[Invest](#)

#### We recommend investment in Openlayer's next round.

- Entry point still attractive at sub-\$100M implied valuation with 5x growth signal.
- Category is Gartner-validated. Institutional buyers are forming budgets now.
- Window to lead or participate at this stage is closing as AI governance becomes mandatory infrastructure.

*"Every enterprise will need this before AI can safely scale.  
Openlayer is the team building it."*

# Thank you.

We're happy to take your questions.

---

*"Openlayer's development velocity has been among the fastest in our portfolio, growing nearly 5x in 2024 and on pace to match that this year."*

Chris McCann, Managing Partner, Race Capital
